Action Items from 2023

☑ Action Items about "**DAS Metadata proposal**", "**miniSEED3**", and "**Development for Legacy Data**", "**Controlled Vocabulary**" have been accomplished

👦💻Action Items about "**StationXML changes**", "**GNSS integration**", "**XML to JSON conversion**" are on-going activities.

📌 Action Item about "**QuakeML evolution**" and "**Event Types Nomenclature**" are kept until next Meeting.

✗ Action Item about "**Reproducibility**" is discarded due to lack of interest.

New Action Items

- **DAS Metadata:** finish evaluation and coordinate with WG3 if this metadata type should be included as one of the options of the "format" parameter in the Station web service.
- **Controlled Vocabularies:** Proceed with an experiment to use AI/LLM from the accepted sources to come up with a foundational model for review by this WG.
- **New data formats:** The collaboration of data centres continues and the group will report its advances in future meetings.
- **StationXML:** Collect all requirements from WG5 (and others) in the Issue Tracker. Form a group to classify them and establish a roadmap for the new release.

Other issues

- **New WG for Legacy Data:** There is support for its creation, but the scope and coordination with similar initiatives should be clarified.
